FishTrackPro — unit economics and financial summary

DOHA PRIME VENTURES LIMITED · RC 8674998 · ABUJA, NIGERIA

ONE SUBSCRIBED FARM, PER MONTH

At month 12, on the blended average of the three tiers. Hardware is excluded — it is a separate line, below.

Blended subscription revenue	₦6,214	15 Basic · 15 Personal Pro · 5 Industrial Pro
AIDA inference	−1,250	80 AI calls a month at the budgeted rate
Payment processing	−193	Paystack local: 1.5% + ₦100
Cloud and platform, allocated	−457	Fixed hosting ÷ farms — it falls as we grow
Total direct cost to serve	**−1,900**	
Contribution per farm	**₦4,314**	69.4% contribution margin

WHAT A FARM PAYS

Basic · Personal Pro · Industrial Pro	₦3,000 · ₦7,500 · ₦12,000	Per farm, per month. The owner pays.
Blended ARPU, months 1 / 12 / 24 / 36	₦5,812 · 6,214 · 6,400 · 6,600	Mix shifts toward the paid tiers over time

WHAT A FARM COSTS TO WIN

Marketing salary, May–September 2026	₦50,000	₦10,000 a month for five months
Advertising spend	10,000	Produced two enquiries and no customers
Paying farms acquired	8	
Customer acquisition cost	**₦7,500**	Repaid in 1.7 months of contribution
Twelve months of contribution ÷ CAC	6.9×	Illustrative only — retention is unmeasured

HARDWARE — THE TWO ROUTES

The full kit costs ₦648,000 to buy outright. No smallholder signs that cheque, so we do not ask them to.

	Sold outright	On monthly terms
What the farm pays	₦648,000 once	₦35,000 × 24 months
Total collected	₦648,000	₦840,000
Complete cost to us	−451,006	−451,006
Gross profit	**₦196,994**	**₦388,994**
Margin	**30.4%**	**46.3%**
Our capital is out for	— cash back same month	13 months

Complete cost = build ₦418,275 + installation ₦16,000 + a 4% warranty provision. The Lite kit sells at ₦480,000 against a complete cost of ₦334,526. Leased kits stay on our balance sheet and depreciate over three years.

> **Why the lease, and why it needs capital.** Monthly terms earn ₦192,000 more per kit than selling it outright, and they are the only way hardware actually reaches a Nigerian farm. The cost is that ₦451,006 of our money sits in each pond for thirteen months before it comes back. That is what the raise is for.

Three years, as the model runs today

Base case. Eight paying farms today → 35 at the end of year one → 120 → 320.

SUMMARY

	Year 1	Year 2	Year 3
Total revenue	**₦6,271,351**	**₦18,846,271**	**₦42,853,512**
of which subscriptions	1,564,351	6,160,271	17,872,512
of which hardware	4,707,000	12,686,000	24,981,000
hardware share of revenue	75%	67%	58%
Gross profit	**₦2,447,596**	**₦9,530,445**	**₦24,729,003**
EBITDA	**−₦506,019**	**₦5,127,086**	**₦21,734,990**
Net profit	−1,654,904	1,827,945	15,729,003
Closing cash	6,667,945	4,578,935	12,783,745
Paying farms at year end	**35**	**120**	**320**
Exit ARR — subscriptions only	₦2,609,880	₦9,216,000	₦25,344,000
Lease run-rate at year end	₦2,520,000	₦9,240,000	₦19,320,000

THE DOWNSIDE WE HAVE MODELLED

If we never sell or lease a single kit, and the business is subscriptions alone:

	Year 1	Year 2	Year 3
Revenue, subscriptions only	₦1,564,351	₦6,160,271	₦17,872,512
Gross profit	1,000,057	4,276,232	12,838,692
EBITDA	**−₦2,739,943**	**−₦3,063,768**	**₦3,838,692**

Hardware is 75% of year-one revenue. Without it the business does not reach positive EBITDA until year three. We would rather state that plainly than bury it.

FUNDING ASSUMED IN THESE NUMBERS

BATN Foundation F4F grant	₦3,000,000	Received month 1. IAS 20 deferred income — ₦1,970,000 equipment, ₦1,030,000 operating. Not revenue.
Raise assumed in the model	₦12,000,000	Lands month 4 (January 2027), treated as equity. Months 1–3 run on existing cash, the grant and our own revenue.
Opening position, 30 Sept 2026	₦0 cash	Founder capital contributed ₦748,000 · accumulated loss to date −₦173,000.

WHAT THESE NUMBERS ARE NOT

> **Retention is unmeasured.** No farm has completed a full production cycle on FishTrackPro, so every figure past month one is a projection, not a track record. The 6.9× contribution-to-CAC ratio assumes twelve months of retention we have not yet observed. Our own pilot pond is instrumented and recording; the first full cycle completes in **March 2027**, measured by an agronomist who does not work for us. We will publish the result either way.
