FishTrackPro

Helping commercial fish farmers reduce production risk with AI.

Raising ₦12 million

Olufemi Dominic Fabian · Founder · October 2026

fishtrackpr.netlify.app

Doha Prime Ventures Limited · RC 8674998

Fish losses threaten farm income. Monitoring and records remain weak.

FOUNDER EXPERIENCE

32%

640 of 2,000 fish lost in one production cycle. Founder-reported, one farm.

FCT WATER MONITORING

68%

Reported no water-quality parameter monitoring [1]

EARLY-STAGE MORTALITY

15–40%

Poor water quality and environmental stress trigger early-stage fish mortality [2]

FINANCIAL EXCLUSION

78%

of rural small-scale farmers in Nigeria are financially excluded [3]

WHAT THE WATER COSTS

Unchecked water quality can stress fish, fuel disease and cause sudden losses. [2]

WHAT THE MISSING RECORD COSTS

A farm with nothing written down cannot show a buyer, a dealer or a lender what it produced. It borrows on trust, or it does not borrow.

[1] Journal of Veterinary and Applied Sciences 16(1), 1427–1438.
[2] FAO, Water quality conditions as disease related stressors in Clarias pond culture. Regional survey figures are not national estimates. [3] Multidimensional financial inclusion among Nigerian rural small-scale farmers, survey of 2,300 respondents; smallholder defined as ≤5 hectares. Sector context, not specific to commercial catfish farms.

SOLUTION

FishTrackPro makes each pond easier to manage — and turns farm operations into verifiable and bankable data.

TODAY

Water tests, feed and fish losses are often recorded separately. Changes can go unnoticed until fish die.

WITH FISHTRACKPRO

Farmers keep pond records, see water warnings and track feed efficiency in one place before sudden mortality or poor yield. AIDA explains what changed. Over cycles the same records build into verifiable farm data — evidence a lender has never been able to get.

01 / RECORD

Keeps pond data together

Sensor reading, feed, weight and fsh losses or every pond. Farmers can also add reading manually.

02 / WARN

Catch water risk

farm rules compare readings with safe limits and show the pond, parameter, value and tme in each alert.

03 / TRACK

Track feed efficiency

Fish counts and weights update biomass and FCR. Incomplete records show a provisional result.

04 / EXPLAIN

Ask AIDA

AIDA summarises farm data, explains verified warnings and suggests safe checks.

05 / PROVE

Bankable farm data

Each cycle turns farm operations into verifiable data a lender could assess. We do not lend or score. Needs data.

AIDA · AI DATA ADVISOR

Farm operational rules detect risk. Then AIDA explains in plain language (Hausa, Yoruba, Igbo) the farm data.

FARM RECORDS

Water readings, feed, weights and mortality by pond

›

RULES AND CALCULATIONS

Set operational rules check water limits and calculate FCR from recorded inputs

›

AIDA

Answers questions and summarises the selected farm records

›

FARMER

Checks the pond, seeks help if needed and logs the response

ILLUSTRATIVE AIDA ANSWER

A water reading for the selected pond crossed its saved limit. Check fsh behaviour before next feeding schedule, change water

Records used: latest water reading and alert history. These records do not establish the cause.

Illustration only. No live farm result.

NO DIAGNOSIS
Disease assessment belongs to a qualified specialist.

NO TREATMENT ADVICE
No medicine, chemical or dosage instructions.

NO LOAN JUDGMENTS
It reports farm data; lenders make credit decisions.

MISSING DATA IS VISIBLE
AIDA states what the records cannot establish.

WHY NOW

Nigeria produces less fish each year. The market keeps growing.

01 · THE MARKET PARADOX

−2.8%

a year

Nigerian farmed-fish output, 2015–2022. We produce less of it every year.

+4.9%

a year

Forecast value growth of Nigeria's $415m fish market to 2032. It is worth more every year.

Falling supply, rising value. The difference is imported — **2.2 million tonnes** a year.

02 · CUSTOMER BEHAVIOUR

The phone

The device is already on the farm

Farm staff now carry smartphones with data. The product runs on what is already in their pocket.

IMPLICATION: a farm can start the same day, and take the kit on monthly terms rather than a lump sum.

Sources: FAO / World Bank output 2015–2022 · Nigeria fish market value and 4.9% forecast CAGR to 2032, 6Wresearch 2026 · import volume, Nigerian federal reporting. Market-value growth is a fish-market figure, not a software market.

240 paying farms is 0.21% of the 114,000 farms we could serve.

TAM

0.21% of SAM; month 30

FIRST CUSTOMER PROFILE

Abuja catfish farms managing staff

The owner pays. Staff record feed, mortality and water checks. Hatcheries and cooperatives can introduce us. This profile is being tested.

ILLUSTRATIVE SUBSCRIPTION RUN RATE AT THE 30-MONTH GOAL

Target paying farms, month 30	240
Blended revenue per farm, per month	₦6,214
Projected monthly recurring revenue	₦1,491,360
Projected annual recurring run rate	₦17,896,320

SAM: catfish farms operating above small scale — the segment that keeps some records and feels a bad cycle in money. Farm counts: FAO 2023.

TRACTION · PILOT LEARNING

Fourteen weeks. Twenty-five farmers looked. Fifteen tested it. Eight paid.

25	15	8	9
Interviewed	Registered and tested	Paid	Waiting for a pilot

WHAT CHANGED THROUGH TESTING

→ **Farmers would not type long forms**
The daily log was cut to feed, mortality and sample weight. Everything else became optional.

→ **Alerts in English were ignored by farm staff**
AIDA now answers in Hausa, Igbo and Yoruba.

→ **Nobody trusted an AI that gave orders**
We split the system: fixed rules raise every warning, AIDA only explains.

Most recent billed month	₦46,500
Every cash cost to date	covered by revenue
Grant held — BATN Foundation F4F 2026	₦3,000,000
Pilot cycle and sensor live since	October 2026

What this does not yet prove: retention. No farm has completed a full production cycle on FishTrackPro. That is exactly what this round funds.

Software monthly, hardware two ways — and the lease is how most farms will take it.

01 · SUBSCRIPTION — WHERE EVERY FARM STARTS

BASIC
₦3,000 per farm, per month
One to three ponds. Manual readings, records, alerts and AIDA.

PERSONAL PRO
₦7,500 per farm, per month
Up to ten ponds. Production plans, weekly FCR, performance review.

INDUSTRIAL · ONE FARM TODAY
₦12,000
Unlimited ponds and staff accounts. Becomes the institutional tier when lending arrives.

02 · THE SENSOR KIT — TWO BUILDS, BOUGHT OUTRIGHT

LITE KIT
₦480,000 For a farm starting with one pond.

FULL KIT
₦648,000 For a farm running several ponds.

03 · THE LEASE — THE ROUTE WE EXPECT MOST FARMS TO TAKE

₦35,000
a month for 24 months, Full Kit — then it is the farms property

WWhy a farm takes it: some farmers cannot make a ₦648,000 decision. The payment sits beside the subscripton instead of standing in front of it.

Why we offer it: ₦840,000 collected against ₦451,006 built — 46% against 30% outright. Our capital is out 13 months, which is what the kit financing pool funds.

A 5,000-FISH CYCLE

- cost per fish to > 1kg	₦2,000
- planned cycle cost	₦10 million
- sales price per KG	₦3,000

IF 15–40% OF STOCK DIES
gross sales foregone ₦2.25–6 million

₦35,000 A MONTH
fish per month is 12 fish

Farm figures are founder estimates at ₦2,000 cost and ₦3,000 sale per fish. Gross sales foregone are not profit, and no kit saving has been measured yet.

GO TO MARKET

We start with Abuja hatcheries and cooperatives, then test other channels.

01 / NOW / FOUNDER RELATIONSHIPS

Hatcheries and cooperatives

Pilot farms run here and one cooperatve leader reaches dozens of members in a single introducton. Hatcheries do same with their customers

›

02 / AFTER PILOT EVIDENCE

Direct digital

Pilot-farm results and video bring farmers to us. This channel most efficient once there is a result worth showing.

›

03 / LATER CHANNEL TEST

Feed suppliers

Dealers sell feed on credit and carry the risk. A farm's records show which farms repay, so introducing us protects the dealer's money.

FARMER JOURNEY — AND WHERE EACH REVENUE LINE BEGINS

Introduction — by a trusted party

›

Demonstration — on the farmer's own data

›

Onboarding — first pond, first log

›

Paid subscription — owner chooses plan

›

Kit on terms — the record makes the case

›

Renewal — month two, and after

Channel test: compare cooperative referrals with digital outreach on paid conversion, acquisition cost and second-month renewal.

The model is proven elsewhere. Nobody runs it on Nigerian aquaculture, in farmers native language, with a sensor.

	Nigerian catfish	Farmer's own language	Own sensor hardware	Hardware on terms	Record used for credit
FishTrackPro	●	●	●	P	P
AquaTrack · Nigeria	●	?	—	—	●
Aquarech · Kenya	—	—	—	?	●
Eruvaka · India	—	—	●	?	—
Aquaconnect · India	—	—	?	?	●
Notebook and memory · status quo	●	●	—	—	—

ALREADY TRUE: our own sensor is in the pond, reading temperature, dissolved oxygen and pH into the app without anyone typing, with ammonia risk computed from pH and temperature. STILL TO PROVE: paid retention, and a lender who accepts the record. P = built and costed, not yet in a customer's hands. ? = not verified from public product information.

WHERE WE DIFFER ON CREDIT: Aquarech has given feed on credit against farm records since 2019 — the model works, and we are not claiming to invent it. Their record is what the farmer types. Ours is what the sensor saw, which nobody can mis-key. We neither lend nor score; the farmer chooses who sees it.

TEAM

The founder is the customer. He lost the stock, then wrote the software.

FOUNDER & CEO · FULL-TIME

Olufemi Dominic Fabian

Abuja catfish farmer and electrical engineer. A water-quality loss led him to build FishTrackPro.

Built the product himself; holds the BATN Foundation Farmers for the Future 2026 grant.

HARDWARE & ROBOTICS

Udofia Silas

Electrical and Electronics engineer. Builds the solar pond sensor and manages kit costs.

MARKETING

Uwah Happiness

Leads outreach and cooperative onboarding since May 2026; helped convert early interviews to paying farms.

MEDIA & BRANDING · PARTNER

Johnmary Agbo

Product designer and media partner, GB Foods. Leads the visual identity and pilot-farm videos.

WHAT THIS ROUND HIRES: **a field agronomist to run the pilot farms and verify outcomes independently of us, and a second engineer so hardware and platform stop competing for the same hands.**

UNIT ECONOMICS

Modeled month-12 contribution: ₦4,314 per farm, before fixed costs.

35-FARM MIX · 80 AI CALLS / MONTH · MODEL

Blended subscription revenue	₦6,214
AIDA inference budget	−₦1,250
Paystack local fee, blended	−₦193
Cloud and hosting allowance	−₦457
Modeled variable cost	−₦1,900
MODELED CONTRIBUTION	₦4,314
Modeled margin	69%

ACQUISITION · FOUNDER ESTIMATE, FIRST 8 FARMS

Marketing labour, May–Sep 2026	₦50,000
Advertising spend	₦10,000
Paying farms acquired	8
ESTIMATED ACQUISITION COST	₦7,500
Modeled months to recover cost	1.7
12-month contribution ÷ CAC	6.9×

FULL KIT · GROSS SPREAD BEFORE OTHER COSTS

Outright sale	₦648,000 once	30%
24 instalments of ₦35,000	₦840,000 over 2 years	46%

Build cost ₦451,006. Spreads exclude installation, servicing, financing and missed payments.

Founder estimates ₦60,000 to acquire eight paying farms: ₦7,500 each. Payback uses modeled contribution of ₦4,314/month; the 12-month ratio assumes no churn.

REVENUE FORECAST

₦6.3m to ₦42.9m — and EBITDA turns positive in year two.

	YEAR 1 Oct 26 – Sep 27	YEAR 2 Oct 27 – Sep 28	YEAR 3 Oct 28 – Sep 29
Paying farms at year end	35	120	320
Kits on monthly terms / outright sales	6/6	22	52
Subscription revenue	₦1.56m	₦6.16m	₦17.87m
Hardware — sold outright	₦3.55m	₦6.46m	₦10.18m
Hardware — monthly terms	₦1.16m	₦6.23m	₦14.81m
Total projected revenue	₦6.27m	₦18.85m	₦42.85m
EBITDA	−₦0.51m	₦5.13m	₦21.73m
Subscription share of revenue	25%	33%	42%

WHAT DRIVES THE FORECAST

The forecast starts with eight founder-reported paying farms. Farm counts and kit volumes in later years are targets, not contracted orders.

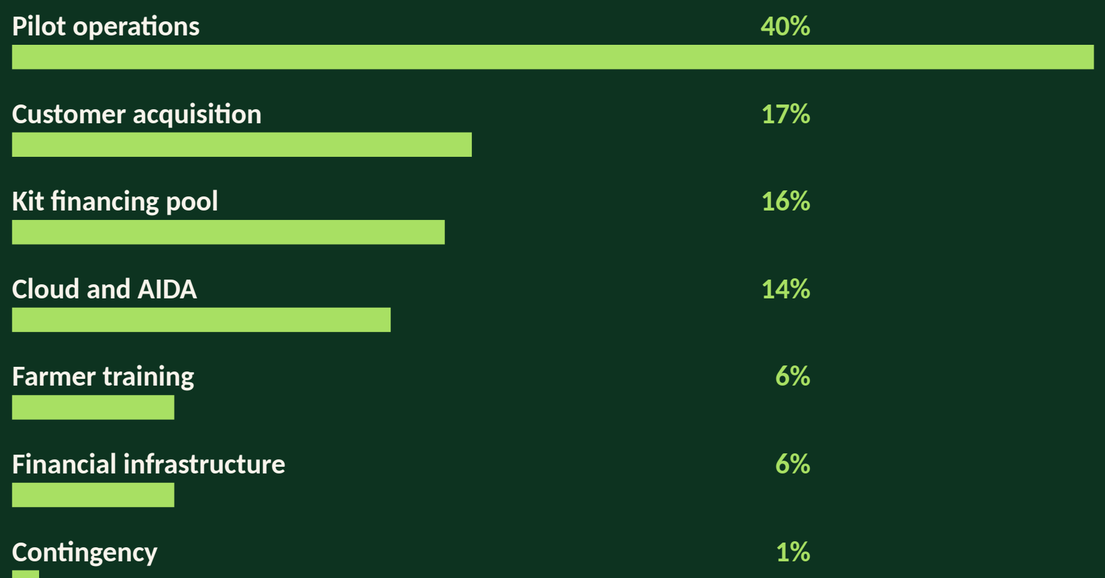

KIT PAYMENT PLANS REQUIRE CASH

Year 1: four full kits at ₦648,000 plus two Lite kits at ₦480,000 total ₦3.552m outright. Six other kits use ₦35,000 monthly plans. We fund plan kits upfront. Funding and grants are excluded from revenue.

FUNDING ASK · NEXT STEP

₦12,000,000 to complete the pilot, prove retention, and turn evidence into paying farms.

USE OF FUNDS

Funds 18 months. The kit financing pool is capital, not cost — it returns over 24 months at 46% margin.

MEASURABLE OUTCOMES

MONTH 1 · OCTOBER 2026 · UNDER WAY

Pilot cycle under way on our own farm — stocked, full pond record, and our own sensor in the water reading temperature, dissolved oxygen and pH straight into the app, with ammonia risk computed from pH and temperature.

MONTH 4 · JANUARY 2027

First external installations on 28 January. Farms that have been recording by hand get the same sensor, which gives us the before-and-after comparison on a pond that is not ours.

MONTH 6 · MARCH 2027

First full cycle completes. Survival and feed conversion measured from stocking to harvest.

MONTH 12 · SEPTEMBER 2027

35 paying farms. ₦217,500 monthly recurring revenue, and an external cycle verified by somebody other than us.
