

01 · THE HARDWARE

The sensor node, built in-house.

An ESP32 microcontroller with a waterproof temperature probe, bench-tested against hot and iced water. The tablet beside it shows the same readings arriving in the farm dashboard seconds later. This is our own build, not a repackaged commercial logger.

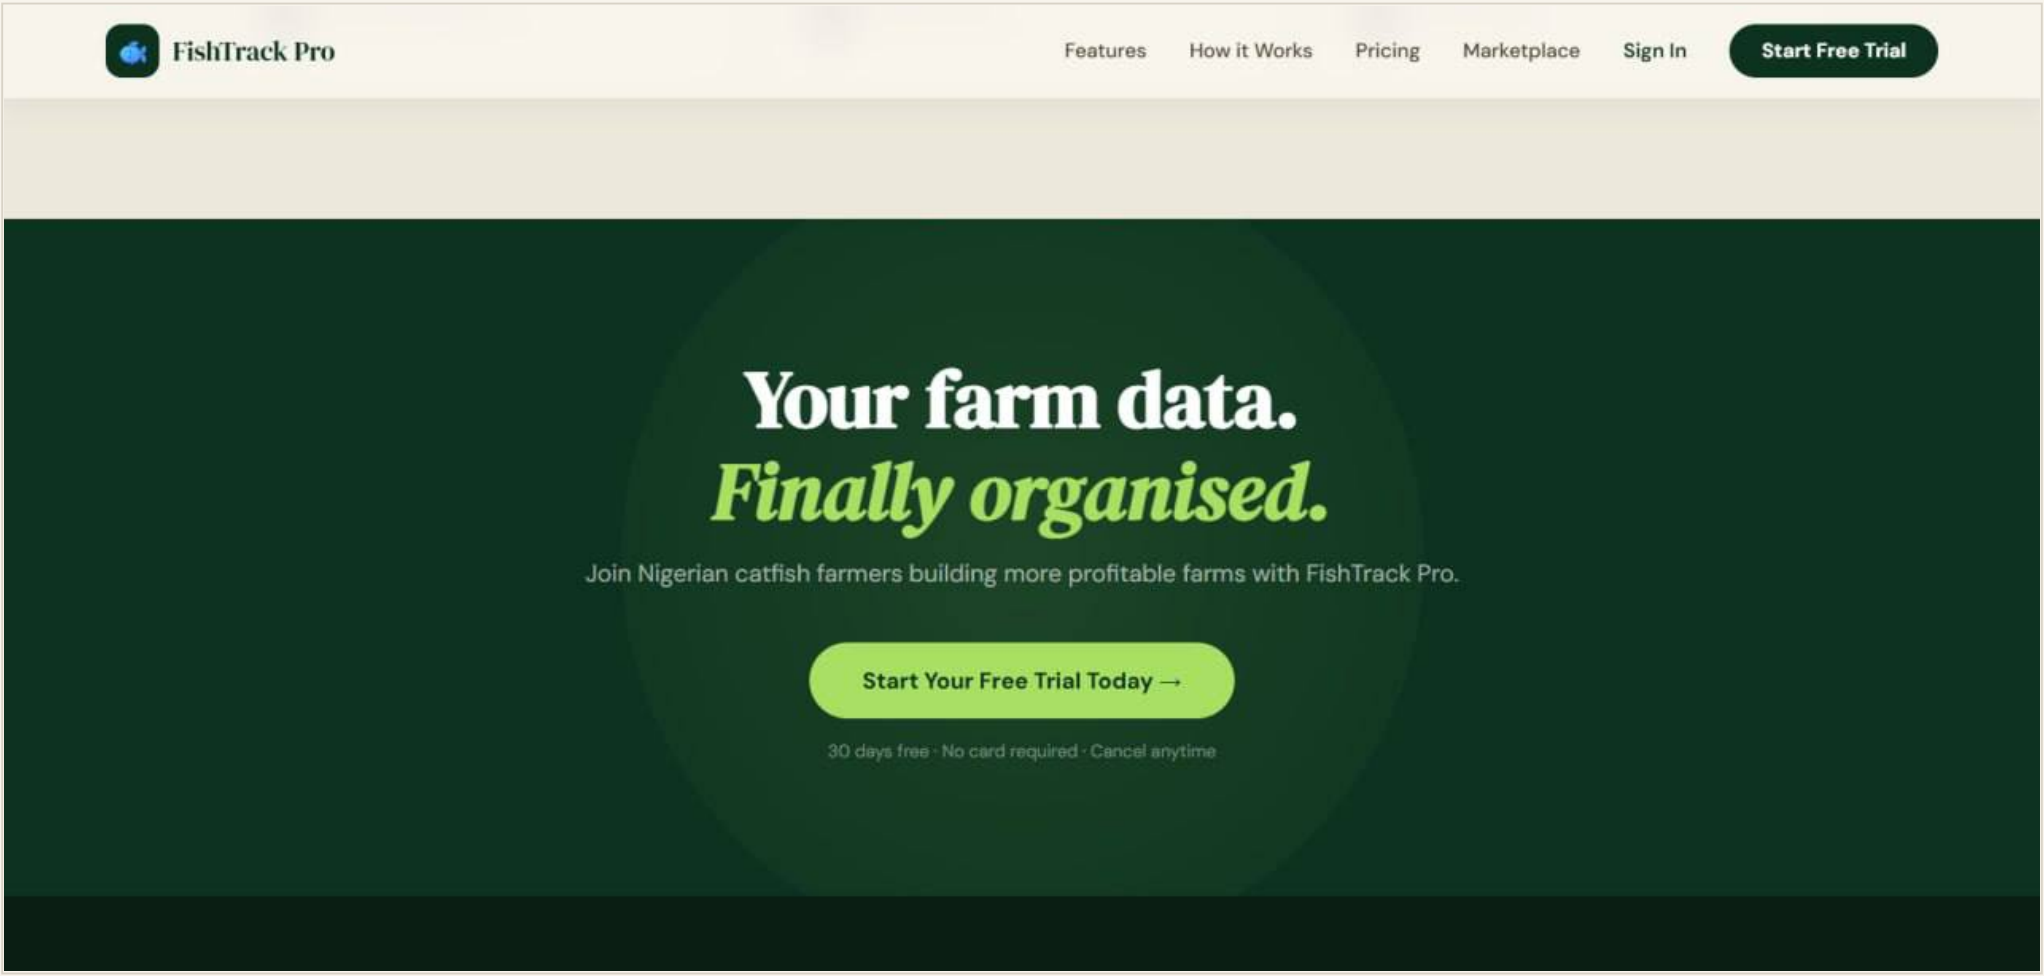

02 · INSIDE THE APP

An advisor that stays quiet, and records the farm can take away.

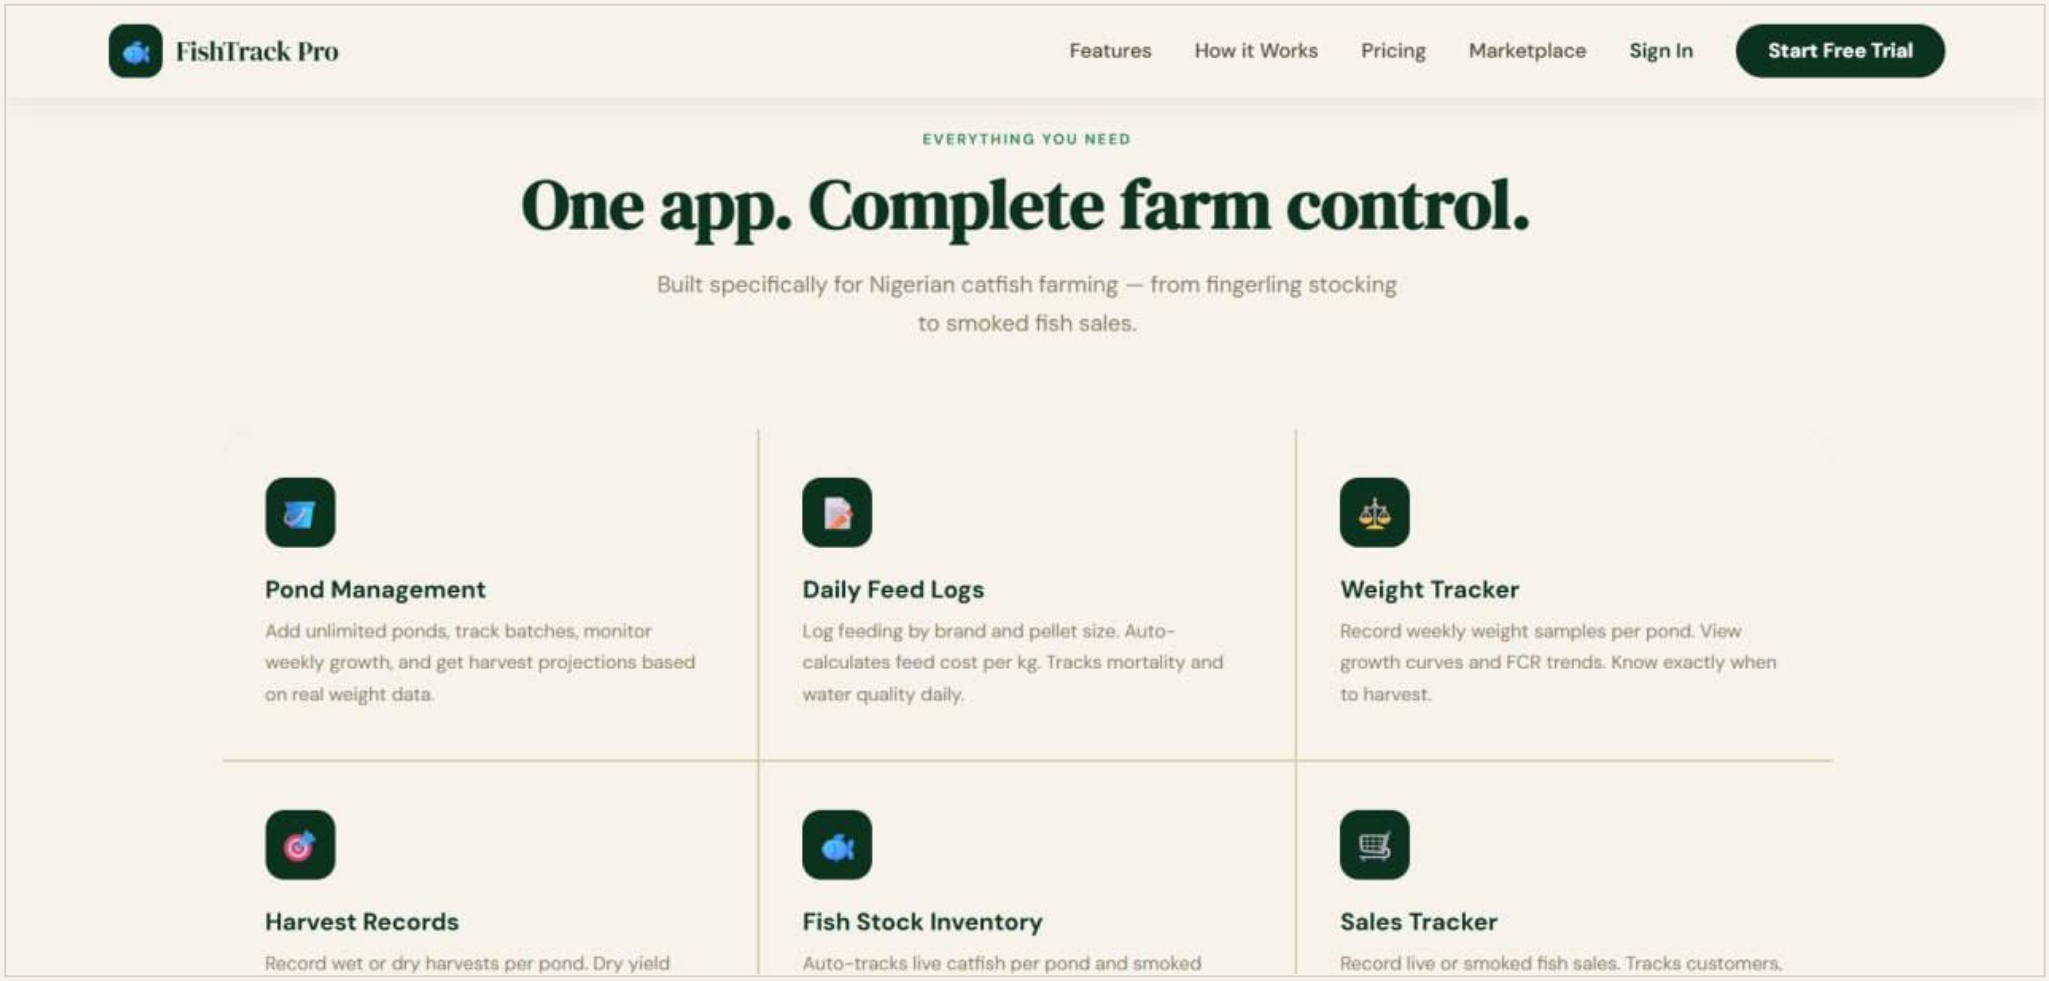

Above: AIDA reports only when a reading crosses a threshold or a pond drifts from plan — and names what is missing rather than letting silence imply all is well. Below: every log and reading exports to CSV or PDF. On this farm, 1,089 water readings, 732 of them captured by sensor rather than typed by hand.

03 · THE PRODUCT

fishtrackpr.netlify.app

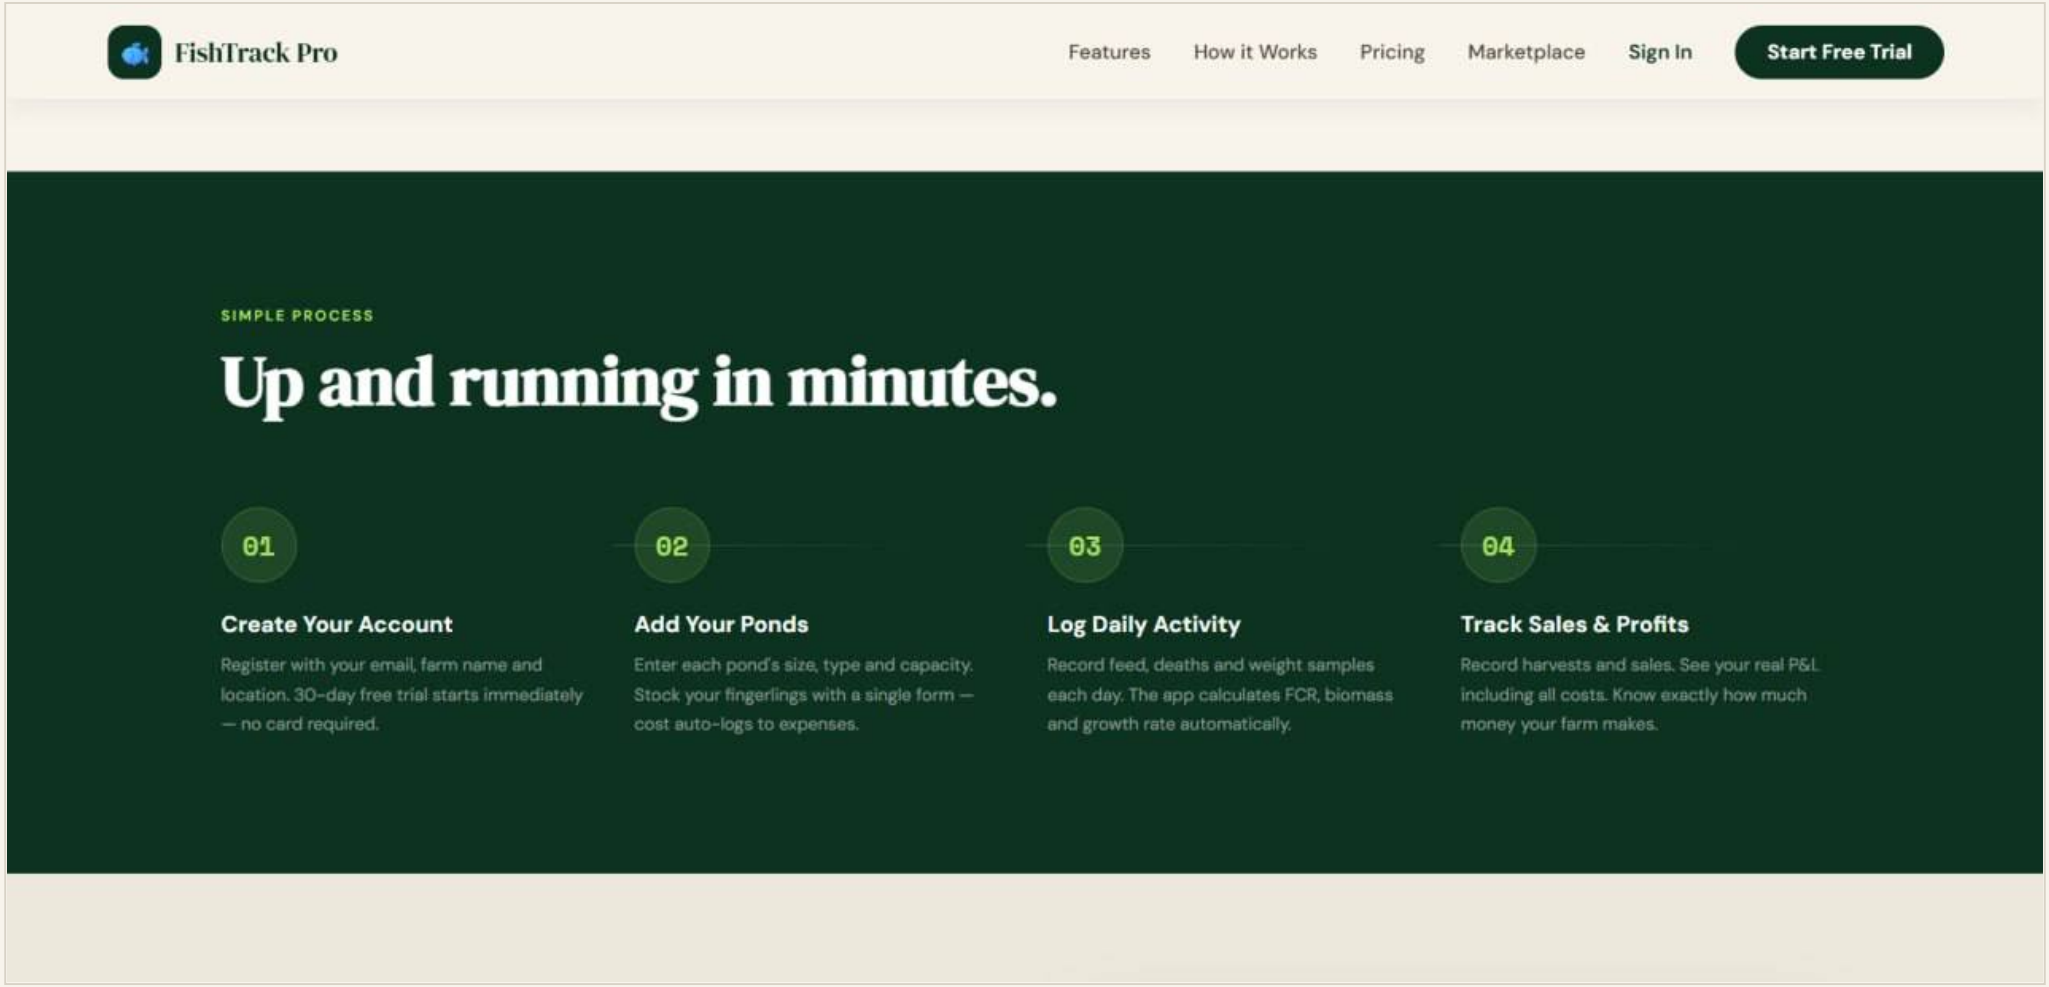

The live product. Any farmer can create an account and start a 30-day trial without speaking to us.

04 · WHAT IT DOES

One app, built for Nigerian catfish farming.

Pond management, daily feed logs, weight tracking, harvest records, stock inventory and sales — from fingerling stocking through to smoked fish.

05 · ONBOARDING

Up and running in minutes.

Create an account, add ponds, log daily activity, track sales and profit. No installation and no field visit required to begin.
