OLUFEMI DOMINIC FABIAN

FOUNDER & ENGINEER · AGRICULTURAL TECHNOLOGY · QUANTITATIVE ANALYSIS

Abuja, Federal Capital Territory, Nigeria · +234 813 834 2270 · olufemidominic@gmail.com
dohaprimeventure.com · fishtrackpr.netlify.app · Nationality: Nigerian

PROFILE

Electrical/Electronic engineer and founder building technology for Nigerian aquaculture. Designed and shipped **FishTrackPro** — a water-monitoring and farm-records platform combining a solar-powered IoT sensor with a multilingual AI advisor — now paid for by eight commercial catfish farms. Work spans embedded hardware, full-stack development, AI integration and financial modelling, grounded in operating a working catfish farm. Currently reading for an MSc in Financial Engineering at WorldQuant University, extending a quantitative foundation toward data-driven decision systems in agriculture and finance.

EDUCATION

MSc, Financial Engineering ***2026 – present***

WorldQuant University (online)

B.Eng, Electrical/Electronic Engineering ***2017 – 2023***

Akwa Ibom State University, Ikot Akpaden · Second Class Upper (2:1) · CGPA 3.98 / 5.0

- Control Theory · Digital Signal Processing · Data Communication & Networking · Numerical Analysis · Statistics & Probability · Object-Oriented Programming.

SELECTED AWARDS & PROGRAMMES

BATN Foundation, Farmers for the Future 2026 — competitive agricultural grant, ₦3,000,000. Awarded 2026.

FCMB AgriTech Programme 2026 — selected participant; completed the operational excellence module and implementation pledge.

ACE Startup Academy 2026 — pitched FishTrackPro at the preliminary round, Abuja.

Google AI Professional Certificate — Google / Coursera, October 2026. Eight courses: AI fundamentals, research, writing, content creation, data analysis, app building and deployment. Verify: coursera.org/verify/professional-cert/L6V1JYFLOO9Q

CS50P — Introduction to Programming with Python, Harvard University (online).

EXPERIENCE

Founder & Product Lead — FishTrackPro ***2026 – present***

Doha Prime Ventures Limited (RC 8674998) · Abuja, Nigeria

- Built and launched a farm-management and water-monitoring platform for Nigerian catfish farms. **Eight paying farms**, fifteen registered, from twenty-five structured customer interviews.
- Designed the IoT sensor end to end: a solar-powered ESP32 node reading temperature, dissolved oxygen and pH, computing un-ionised ammonia risk from pH and temperature rather than fitting a fourth probe.
- Engineered a rules-first alerting architecture — deterministic thresholds raise every warning, with an LLM advisor restricted to explanation — so a safety alert never depends on a model responding.
- Implemented server-side Web Push so critical water alerts reach a farmer's phone with the application closed; built the ingest API, Firestore data model and device authentication.
- Shipped the advisor in **English, Hausa, Igbo and Yoruba** after testing showed English-only alerts were ignored by farm staff.
- Authored a 36-month financial model (1,800+ formulas, balancing statements) underpinning a ₦12m raise.
- Stack: JavaScript, React, Firebase/Firestore, Netlify Functions, Arduino/C++ on ESP32, Anthropic API.

Founder & Agribusiness Manager *2025 – present*

Doha Prime Ventures Limited · Abuja & Plateau State, Nigeria

- Operate a commercial catfish farm across four earthen ponds — full production cycles from fingerling stocking through processing, packaging and retail distribution.
- Apply feed-conversion modelling, profitability projection and multi-scenario cost-benefit analysis to stocking and harvest decisions.
- Lead a horticulture pilot in Jos, Plateau State covering Hass avocado and strawberry alongside volume fruit crops in Abuja.

Engineering Intern — National Youth Service Corps *Dec 2025 – present*

Federal Ministry of Power · Maitama, Abuja

- Technical assistant to the Office of the Deputy Director, Energy Resources — supporting policy analysis, administrative coordination and internal reporting within the energy planning division.

Founder & Lead Analyst *2024 – present*

Visionary Prime Capitals Ltd · Abuja, Nigeria

- Systematic forex trading practice built on structured technical analysis, documented journaling and volatility-based position sizing, with the goal of transitioning to algorithmic execution.

SKILLS

Software: JavaScript · React · Node · Firebase/Firestore · Netlify Functions · Python · HTML/CSS · Git

Hardware & IoT: ESP32 / Arduino (C++) · sensor calibration · solar-powered field nodes · device authentication and telemetry

AI: LLM integration, prompt design and safety guardrails · retrieval over structured farm records · multilingual deployment

Quantitative: financial modelling · unit economics · FCR and yield analytics · cost-benefit and scenario analysis

Domain: commercial aquaculture · water quality management · horticulture · agricultural supply chains

RESEARCH INTERESTS

Data science for agricultural productivity and food systems · machine learning for yield and supply-chain optimisation · verifiable farm data as a route to agricultural credit · algorithmic trading.

LANGUAGES

English — full professional · Yoruba — native · German — beginner
